

PUT SWAYING BEHIND YOU. FOR GOOD.

The AL-KO AKS 3004 Stabiliser Coupling gives you all the peace of mind you need for safe, stable towing. The AKS 3004's built-in friction pads grip the towball to reduce snaking movements—immediately and automatically in both horizontal and vertical directions. There's no loss of stability, even when heavy vehicles create sudden turbulence or a slipstream.

Compact design and safety features make the AKS 3004 easy and safe to operate. Once the visual indicator shows that the coupling is engaged, simply lower the easy-grip handle and four-spring-loaded friction pads press firmly against the towball.

The robust, German-engineered AKS 3004 is manufactured and assembled to AL-KO's strict quality standards. It is rust-protected and has an optional security lock for protection against theft.

The AKS 3004 has long been a trusted choice on Europe's winding roads. Now it takes on the Australian terrain with ease.
