

AL-KO Heavy Duty Jockey Wheels

AL-KO
Vehicle Technology

AL-KO Australia's extensive range of caravan and trailer accessories includes two heavy duty Jockey Wheels. Perfect for extra heavy-duty applications, these jockey wheels are activated by winding the handle, which automatically retracts the wheel and fork to a travelling position. AL-KO's heavy duty jockey wheels are available in both a 500kg and an 800kg version and feature a sophisticated truss bearing system to ensure handle rotation is as effortless as possible.

500KG AUTO RETRACT JOCKEY WHEEL – Part No.: 622400

The 500kg Auto Retract Jockey Wheel is fully automatic, meaning that by simply rotating the handle, the wheel and fork locks in place when travelling. The same action automatically returns them to a down position when necessary. The unit, which weighs only 10kg, has a fixed mounting bracket and a wheel diameter of 200mm.

800KG DROP DOWN SNAP-LOCK JOCKEY WHEEL – Part No.: 622800

The 800kg Drop Down Snap-Lock Jockey Wheel is perfect for even heavier applications. This semi-automatic 800kg version also enables users to retract the wheel with a simple rotation of the handle and then snap-locks into the retract position. However, unlike the 500kg unit, the user must manually release the wheel. The 800kg unit weighs 17kg and has a wheel diameter of 260mm. The Jockey Wheel racket comes as an integrated part of the assembly.

So to account for your extra heavy-duty applications, use AL-KO Australia's Heavy Duty Jockey Wheels.
