HW SERIES WATER PUMP PRODUCT ANNOUNCEMENT

ALKO International would like to make you aware of a product support issue on the HW SERIES Waterpumps .

Problem – A small number of HW601 and HW 802 have been returned for warranty with reported bladder problems or constant cycling with low water pressure .

Solution – LOW AIR PRESSURE.

Switch pump off, open all outlets. At the rear of the vessel, there is a black circular cover that can be removed by unscrewing. The Air Pressure valve will now be visible. Ensure that the Air Pressure 'PSI' is at **20PSI**.

Check this with air hose & pressure gauge.

AL-KO HW Series Waterpumps are factory set to 20PSI, but constant use or incorrect factory setting may reduce air pressure.

This is a simple maintenance check that should be carried out on all vessel / bladder type waterpumps and will ensure constant performance of your pump and will help to avoid low flow rate.

If you have any further queries, please contact your local AL-KO office on **1800 035 603** or email info@alko.com.au

**ALKO WOULD ALSO LIKE TO THANK OUR
CUSTOMERS FOR THEIR SUPPORT**
