### Products

Sens-a-BRAKE manufactures a range of high performance hydraulic trailer brake products including electric brake controllers, trailer suspension systems, and brake by wire electric over hydraulic trailer brake actuators, however as braking rules and regulations can vary between countries please be sure to select the correct country or region when searching for information.

Faster and smoother than comparable systems, the Sens-a-BRAKE hydraulic trailer brake actuator is particularly well suited to horse trailers, boat trailers, race car trailers, and travel trailers. For commercial applications its built in diagnostic and fault feedback systems provide levels of safety previously unheard in the light trailer industry.

Utilising state-of-the-art electrically generated air over hydraulic trailer brake technology, the Sens-a-BRAKE trailer braking approach provides more efficient brake activation making the towing experience, more pleasurable, and ultimately much safer.

Industry compatibility has also been achieved with the new NA Series hydraulic trailer brake actuators being approved for use with the FORD Tow Command system, and the Tekonsha Prodigy brake controller (US spec product).

For information on the companies development of ABS anti-lock hydraulic trailer brake systems and automatic load sensing technologies, please click on the appropriate icon, for information on electric brake controllers and electric over hydraulic trailer brake actuators, please select your country or continent to continue.

Brake by wire and ABS - more innovative trailer brake solutions from Sens-a-BRAKE.

Air Spring bellows suspension for boat trailers

*Although product differences may appear to be minor, they take into account regulatory requirements, installation and operational changes, and performance enhancements.*

**All prices are GST Inclusive**
